

At Abstracta, we have been working to create better soundscapes since 1972 – which makes us acoustics pioneers. Today, we offer a wide variety of solutions for different types of environments and requirements – from thoughtfully designed sound-absorbent screens and surfaces to innovative furniture with integrated acoustic characteristics. And in close collaboration with some of the world's most influential contemporary designers, we are constantly exploring new ways to create better soundscapes.

We manufacture our furniture in the province of Småland, Sweden, and our customers are located throughout the world. Abstracta is part of Lammhults Design Group.

Unlike the landscape, the soundscape doesn't disappear as you close your eyes. There's no escaping it, but there are many ways to make it more pleasant.

Collection 2023

Content

- 10 Acoustic Wall Art
- 16 Silent Pods
- 26 Acoustic Lighting
- 42 Suspended Absorbers
- 50 Acoustic Wall Panels
- 70 Floor Screens
- 86 Desk Screens
- 98 Cubicles
- 112 Acoustic Furniture
- 118 Ceiling Baffles & Ceiling Panels
- 126 Writing Boards

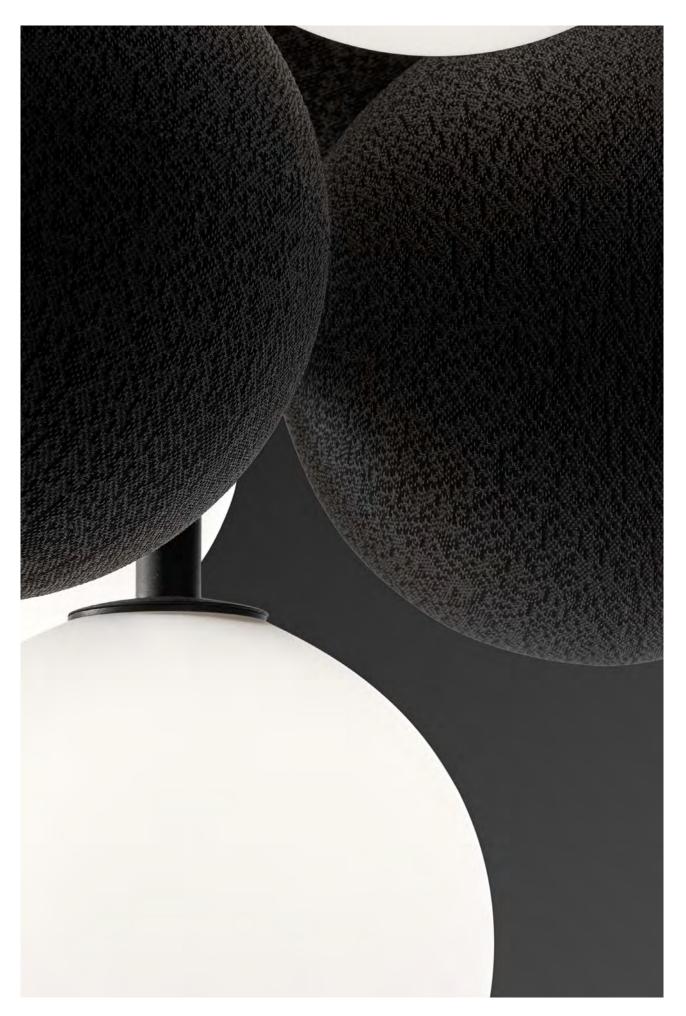

Soundscapes for new patterns of work

Tomorrow's workplaces will be more sustainable, more human, and more creative. They will be designed with a greater focus on well-being and health. It is these kinds of environments that we at Abstracta strive to help create.

Our starting point is always a space's soundscape. We are convinced that awareness about the importance of soundscapes in terms of well-being will continue to grow.

Our products are designed to address the diversity of requirements that characterise contemporary workplaces. The opportunity for employees to work undisturbed, and the fundamental necessity of a pleasant soundscape and a stimulating visual surrounding.

Abstracta's Design philosophy

At Abstracta, we know that sound is crucial to human well-being. Our purpose is to design comfortable soundscapes that make people feel better. Our design philosophy guides us in our everyday practice and helps us to achieve our purpose.

We believe in attentive design

Attentive design seeks solutions through innovation. It identifies overlooked problems and explore better ways to solve familiar ones. Innovation is not an end in itself but a means. What matters is the value a product adds to a soundscape.

Attentive design is curious and probing. It can be about investigating how to add acoustic value to new categories of furniture, finding manufacturing materials that contribute to biodiversity, or adding functionality to a product to maximise its versatility.

Ultimately, attentive design is about focusing on the human need for both functionality and beauty. Attentive design is open, empathetic and interested in the spaces it is part of.

Design is a collaboration

We are a design-oriented company that prizes working closely with our designers. We believe that design is a collaborative and exploratory endeavour, aimed at uncovering new ways to bring lasting value to a space. Our belief that design is collaborative also means that we are open-minded and plugged into world events and developments in science and technology. For example, we are continuously examining how we can employ renewable natural materials like cork, hemp and flax in new ways.

Good design is always sustainable

There are only two good reasons to create a new product: to solve a problem that was previously overlooked or to provide a better solution to a familiar one. It's a simple matter of economics.

Our thrifty approach to design also applies to energy and materials. In fact, we're opposed to all forms of waste. We try, for example, to use any waste produced by one part of the design process as material in another part.

Our products are made from materials of the highest quality and speak a design language that is timeless. We prefer to work with renewable natural and recycled materials. And we avoid mixing materials, which makes our products easy both to repair and to recycle. Design philosophy

Zero-waste with Abstracta's recycling service

We have developed a recycling service for our clients. We're collecting worn-out acoustic panels and other products for renovation, reuse or recycling. To facilitate circularity, all our products are module-based.

This is what we do today to reduce our carbon footprint

- Abstracta's factory in Lammhult runs on 100 % renewable energy.
- Textile waste and recycled plastic bottles are used as acoustic filling in our products.
- 95% of our products are Möbelfakta certified.
- Since 2019, all our new company cars are either electric or plug-in hybrids.
- We prioritize local suppliers to reduce negative environmental and social impact in our supply chains.
- We prioritize transport partners with Euro 6 vehicles.

Abstracta 2030 – our five sustainability goals

- Carbon-neutral
- Recycling of 100 % of our textile waste
- 100% certified wood
- 100% Möbelfakta certified products
- Circular range of products

Acoustic guide

The soundscape is not visible, but it affects us more than we think.

Three symbols to make it easier to understand how our acoustic products affect the audio environment.

Absorption means that the sound that hits a surface gets absorbed and transformed into heat.

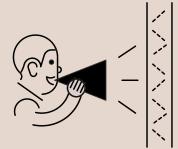

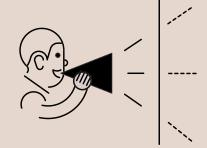

Attenuation means that an object shields off and lessens the sound level from one side of the object to the other.

Diffusion

Diffusion means that a sound hitting a surface "shatters", which helps one avoid unpleasant sound reflections, in other words echoes.

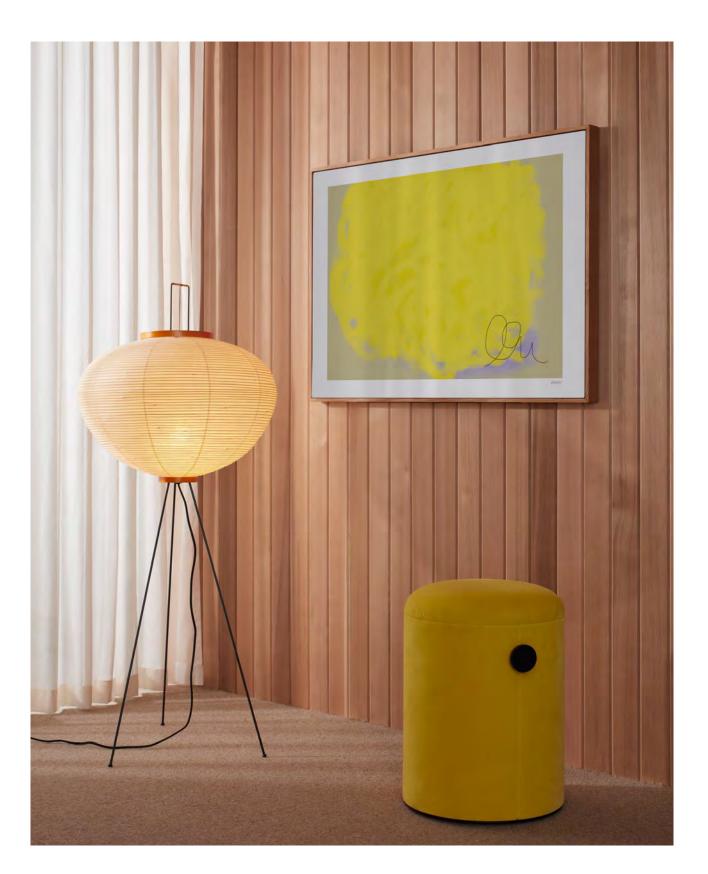

Acoustic Vall Art

Abstracta x Wall of Art

10

Abstracta x Wall of Art

"The collection includes both colourful and more minimalist works."

Abstracta and art platform Wall of Art have collaborated to develop a unique solution that combines acoustics with art. The objective is to create harmonious soundscapes while giving spaces personality and character with works from exciting artists. The collection of sound-absorbing panels featuring a total of 13 different motifs. The participating artists are Annika Hultgren, Evelina Kroon, Lucrecia Rey Caro, and Lisa Wirenfelt.

Absorption

Artist Annika Hultengren

Annika Hultengren's works evoke the sky and the sea in different weather conditions, as well as the abstract expressionism of artists like Barnett Newman.

Artist Evelina Kroon

Evelina Kroon offers a contemporary perspective on traditional craftsmanship. She uses everyday materials like adhesive tape and MDF to create exciting graphic patterns. She has also undertaken highly acclaimed collaborations with ARKET and Svenskt Tenn, among others.

Artist Lucrecia Rey Caro

The works of Argentinean artist and graphic designer Lucrecia Rey Caro have a spontaneous and playful character. With great dexterity, she creates both abstract, organic forms and motifs inspired by everyday life.

Artist Lisa Wirenfelt

Lisa Wirenfelt's works are among the collection's most colourful. Their subtle humour and healthy dose of life-affirming optimism brighten up any space.

Zen Pod

Silent Poes

Zen Pod and Plenty Pod

Zen Pod

Design Staffan Holm

Staffan Holm has a master's degree from the Academy of Design and Crafts at the University of Gothenburg, and has won numerous prizes, including a Swedish EDIDA Chair Award, two Elle Decoration Swedish Design Awards (2017, 2014), a Wallpaper Design Award (2017), and a Bruno Mathsson Award (2013). He has exhibited at Artipelag (2013) and at the Röhsska Museum (2011), among other venues.

Zen Pod is an acoustic oasis. It creates the perfect conditions for digital meetings, quiet conversations and focused work. Its outer acoustic walls also help to improve the soundscape of the surrounding environment by stopping, rather than reflecting, ambient noise. Zen Pod dampens the sound by 31 dB, which means that it achieves sound attenuation class A. Zen Pod is available in two equippment versions: "Essential" and "Advanced". It comes in three sizes; Small, Medium and Large.

Absorption

Attenuation

"The sparse and harmonious design of the room itself is inspired by Japanese interiors."

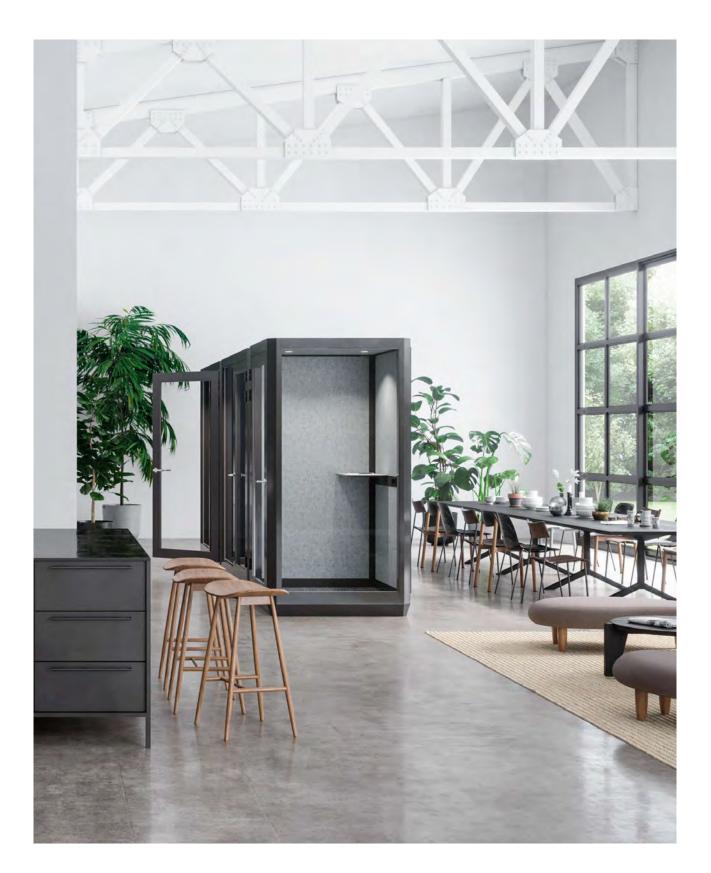

"The room is easy to assemble and use, and is designed to blend in with its surroundings."

Plenty Pod

Plenty Pod is a series of mobile, silent rooms. Their high level of flexibility makes them into perfect representatives of user-friendly architecture. They are designed to offer room for meetings and phone calls in noisy environments such as open-plan offices and public spaces. Plenty Pod is a perfect solution if you are missing a quiet room in an open space office or as often mentioned as an activity based office. Plenty Pod comes in variety of sizes and colours. Complement your Plenty Pod with a video conferencing system - including a complete solution of monitor screen, speakers, camcorder and smartphone control of lighting and fans inside the Plenty Pod.

Absorption Attenuation

D THE LAS

26

Moon

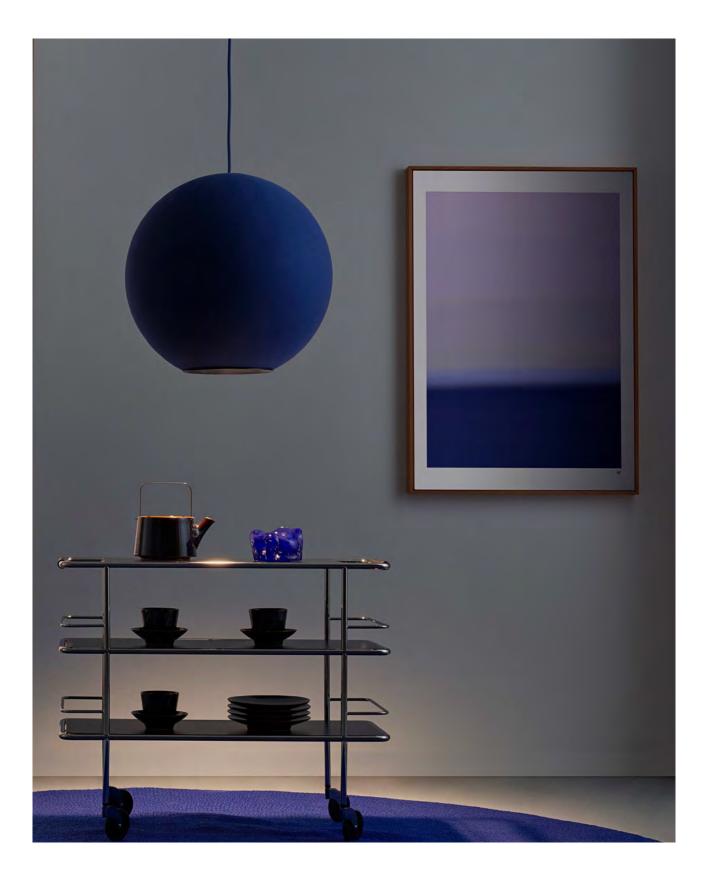

Acoustic Lighting

Moon, Holly, Lily, Scala Ceiling and Trumpet

27

Moon

Two important factors behind a room's atmosphere are its soundscape and its lighting. The Moon acoustic lamp is a superbly orchestrated fusion of lighting and acoustics by designer Thomas Bernstrand, who has coupled his long experience in the former with his deep interest in the latter. A globe-shaped lamp of functional precision, innovative design and exceptional acoustics, Moon provides directed lighting quality of the highest order. Its shape and generous scale allow it to absorb both highand low-frequency ambient noise effectively.

Absorption

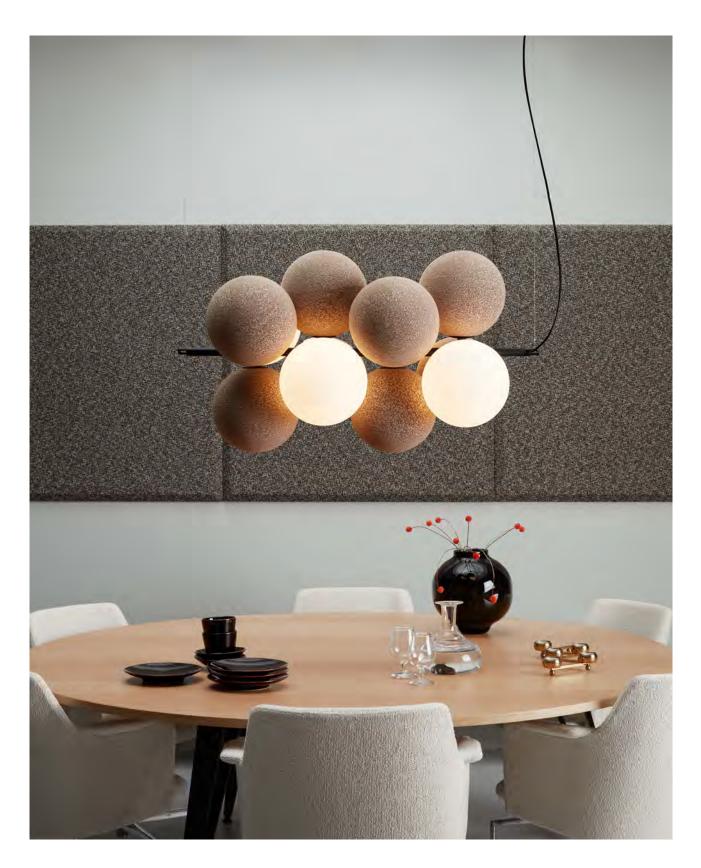

Design Thomas Bernstrand

Driven by curiosity and armed with a critical eye, designer Thomas Bernstrand is devoted to challenging our habitual perceptions, our understanding of things and where they belong. His works often involve unexpected shifts between contexts, resulting in particular design idioms and functionalities appearing in places where they have never been seen before.

Holly

The new Holly acoustic lighting is sculptural, mysterious, and plays with the contrasts between light, reflection, and shadow. The product is good at absorbing low frequency sound. Holly is available in two versions: a vertical one suitable for lobbies and other high-ceiling spaces, as well as in corners for increased acoustic effect; and a horizontal one that can be suspended over large tables in, for example, restaurants, bars, and workspaces.

Absorption

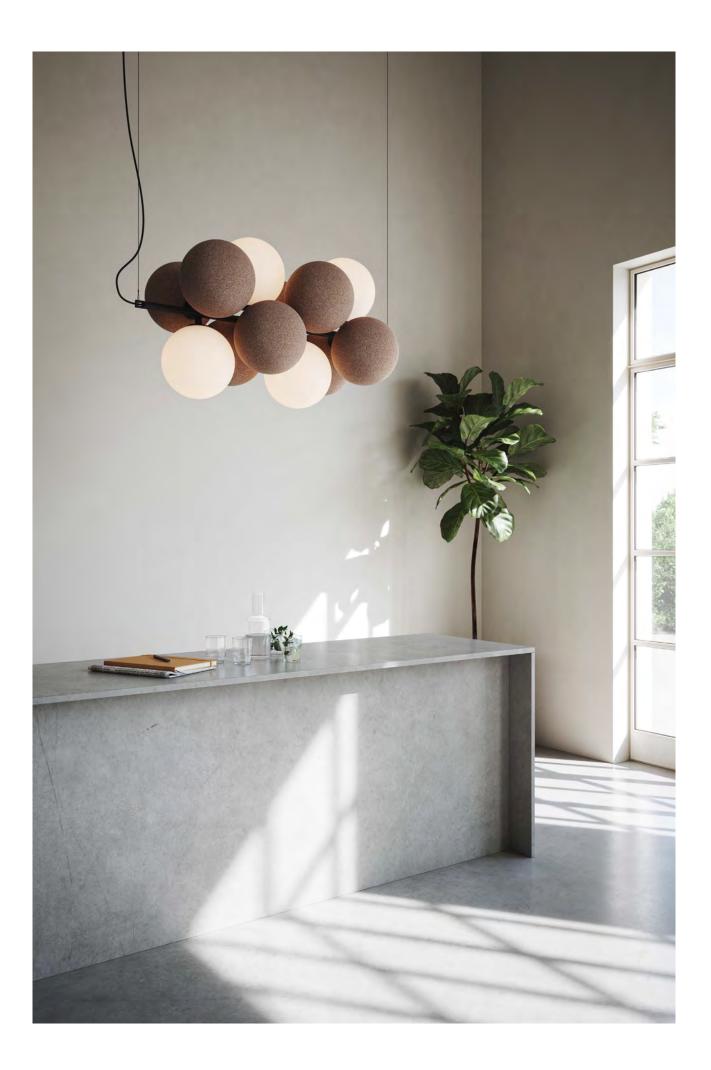

Design Runa Klock and Hallgeir Homstvedt

Runa Klock studied at the Oslo Academy of Fine Arts, but is now based in Ålesund. In addition to design objects, her multi-disciplinary and collaborative practice also conceives food packaging, exhibitions and stage sets. The prestigious Jacob Prize was awarded to Runa Klock in 2020.

Hallgeir Homstvedt studied industrial design at the University of Newcastle in Australia. Today, he is based in Oslo, where he has run his own studio since 2009, before which he worked at renowned studio Norway Says. Over the years, Hallgeir Homstvedt has won numerous awards and his works have been exhibited in London, Tokyo, Oslo, New York and Milan.

"Improving a soundscape is easy. Doing it with style is the hard part."

Lily

Lily got its name from its early prototypes, which resembled water lily leaves. Since then, its shape has been simplified and made more open to association. Still present, however, is the sense that the lamp is floating in the air, imbuing the room with a splendid stillness. Lily's subtle design enables it to retain a soft, organic character, despite its rather geometric form.

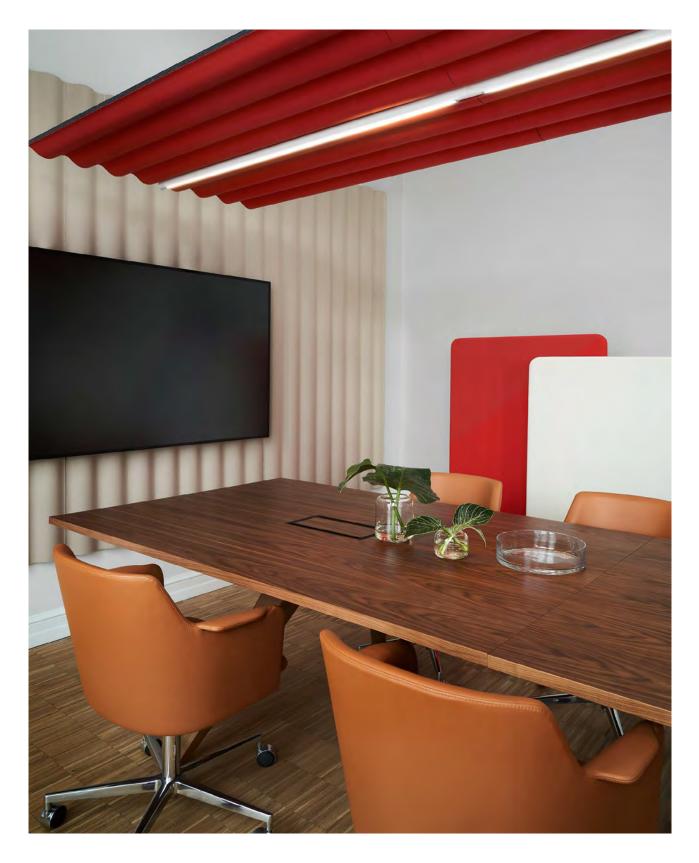

Fully 90 or 120 cm in diameter, Lily is intended for lighting large rooms, such as restaurants and open office spaces – environments where both noise and visual information levels are high. Lily comes in a variety of colours.

Absorption

Design Runa Klock and Hallgeir Homstvedt

Scala Ceiling

Scala is a playful paraphrase on corrugated iron that simultaneously employs the functionality of the shape. The design of the sound-absorbent is not only developed for visual reasons, but primarily to contribute to a softer soundscape.

The ceiling-mounted version of Scala prevents the sound waves from continuing upwards in the room, which contributes to a more pleasant soundscape, for example in an office space or in a restaurant environment.

Absorption

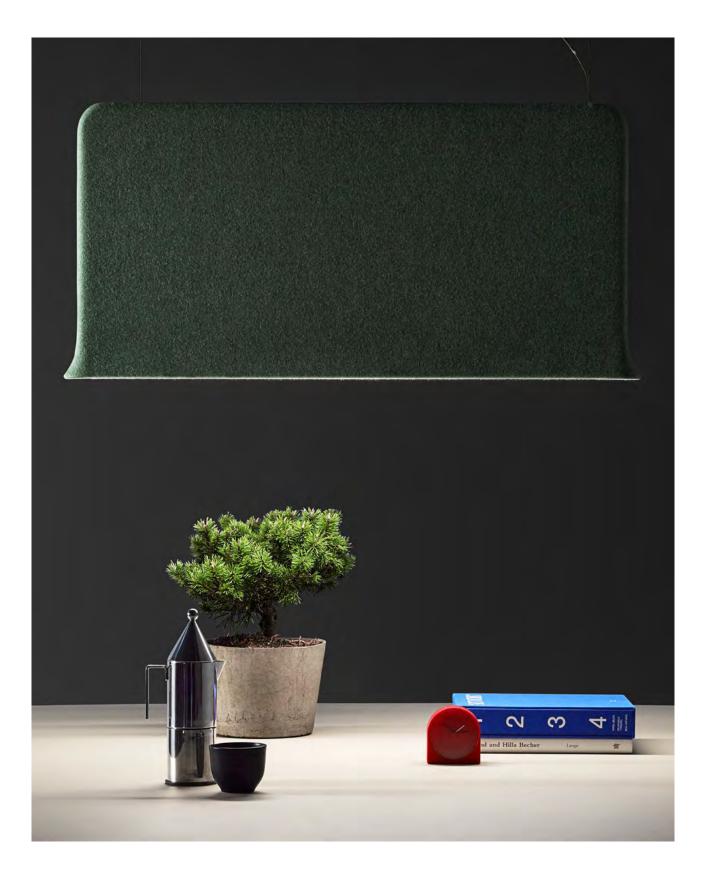

Design Anya Sebton

Anya Sebton is an awardwinning designer and interior designer with commissions from leading Scandinavian producers including Lammhults, Asplund and Abstracta. Her works are found in airports, embassies and museums around the world. A simple graphic style and solution-oriented approach have made her a highly acclaimed designer.

Product family

- Scala Floor p.82
- Scala Mobile table screen p.91
- Scala Suspended p.120
- Scala Table p.90
- Scala Wall p.56
- Scala XL p.52

Trumpet

Trumpet is characterized by simplicity and a careful attention to the detail, which become obvious when you have a close look. Here, the designers use the iconic shape of the music instrument to both direct the light and to make a subtle connection to the space below the lamp. Trumpet is remarkably thin, which gives the product a certain elegance. Yet, it makes a huge difference when it comes to noise.

Trumpet is available in three standard widths (1040, 1640 and 2040 mm) but can be customized in other sizes. It is available in a range of fabrics and colors.

Absorption

Design Stone Designs

Stone Designs is a rewarded Madrid-based design studio. Its main asset is the human factor. Stone makes projects for and because of the people. Cutu Mazuelos and Eva Prego founded their studio Stone Designs in Madrid 25 years ago, right after graduating from University. But their major influence is not from Southern Europe, but from Japan, where they also have a studio, and from Scandinavia.

Suspended Absorbers

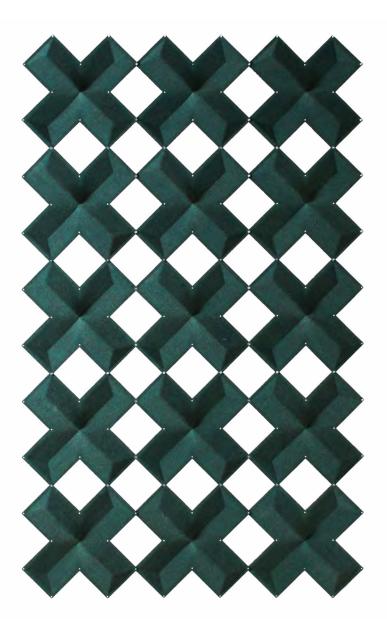

ir-X, Airbloom, Aircon Airflake and Airleaf

42

Air-X

Design Stefan Borselius

As clearly demonstrated by his furniture creations, Stefan Borselius is a designer who takes no shortcuts. Going about things thoroughly is something he learned from his grandfather and great-grandfather, both cabinetmakers. His path to becoming a furniture designer thus began with learning this craft properly at Steneby in Dals Långed. He then continued his studies in Stockholm at the Carl Malmsten Furniture School and later Konstfack University College of Arts, Crafts and Design.

Product family

• Airbloom p.46

• Aircone p.47

• Airflake p.48

• Airleaf p.49

Air-X is a product in the Air family that forms a new graphic pattern with straight lines. The modules are made from pressed felt and are available in a wide range of colours. The modules can be combined with each other to form suspended sound absorbers in a number of shapes and sizes.

Absorption

Diffusion

Airbloom

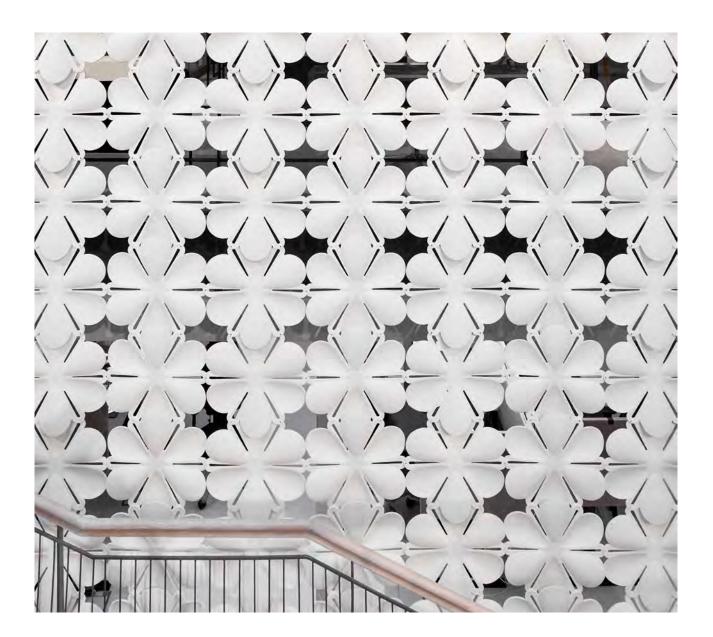

Product family **O** Air-X p.44 **O** Airflake p.48 **O** Airflage p.49

The original idea behind Airbloom is the most iconic symbol of the nature: the blooming flower. Airbloom imbues the room with positive visual energy, while creating a more harmonious soundscape. As with the other Air series products, Airbloom offers a simple way to dampen noise and create separate areas without compromising the room's openness. Airbloom is available in a great many colours, giving you plenty of freedom to create the partition you want.

Absorption

Aircone

Aircone is the sequel to Stefan Borselius's highly successful Airflake. Its design language is comparatively strict and more graphic. Combining the conforming modules with each other elicits a dynamic interplay of lines and shadows. Aircone screen formations are more solid than those of its predecessor, enabling the creation of clearer room divisions. Yet, it is also possible to leave openings to allow light to pass through or to create interesting patterns.

Absorption Diffusion

Airflake

Airflake hanging room divider was created by designer Stefan Borselius in 2006 and was the first product to emerge from the groundbreaking Air concept. Made of fabric-covered moulded fibre felt, it absorbs sound and prevents echoes. The hexagon-shaped modules are assembled together to form 'open' screens that shape or suggest new spaces within a space, while allowing light to pass through unobstructed.

Absorption

Airleaf

Product family • Air-X p.44 • Airbloom p.46 • Aircone p.47

Following his successful Airflake and Aircone products, designer Stefan Borselius brings nature into the interior space. "The idea is that you should be able to create anything – from organic foliage to strict graphic patterns," explains Borselius. Airleaf makes it possible to create separate areas and a pleasant soundscape while preserving the room's openness. You determine the degree of openness yourself by choosing how the leaf-shaped modules are combined.

Scala XL

Accusic Val Panels

Scala XL, Scala Wall, Bits Wall, Domo Wall, Sahara, Sky Wall, Soneo Wall and Triline Wall

Scala XL

To improve the soundscape in large and noisy spaces such as auditoriums, lobbies, and shopping malls, the sound absorbing wall panel Scala XL is perfectly suited since it has a powerful sound absorbing effect. Scala XL wall panel's interplay of shape and material has a powerful sound absorbing effect. The increase of size not only amplifies its acoustic capacity, but also affects its aesthetic qualities. Scala XL sound absorbing wall panel has a bold, sculptural appearance. The design is inspired by arched roofs, and columns. Available in convex and concave forms.

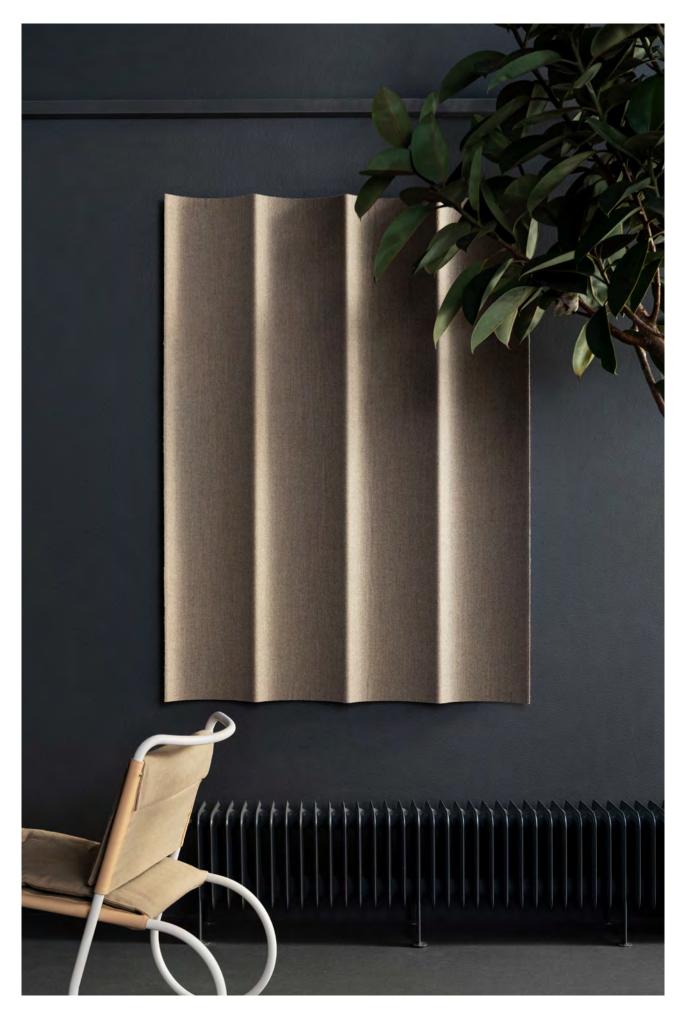

Design Absorption Anya Sebton Product family

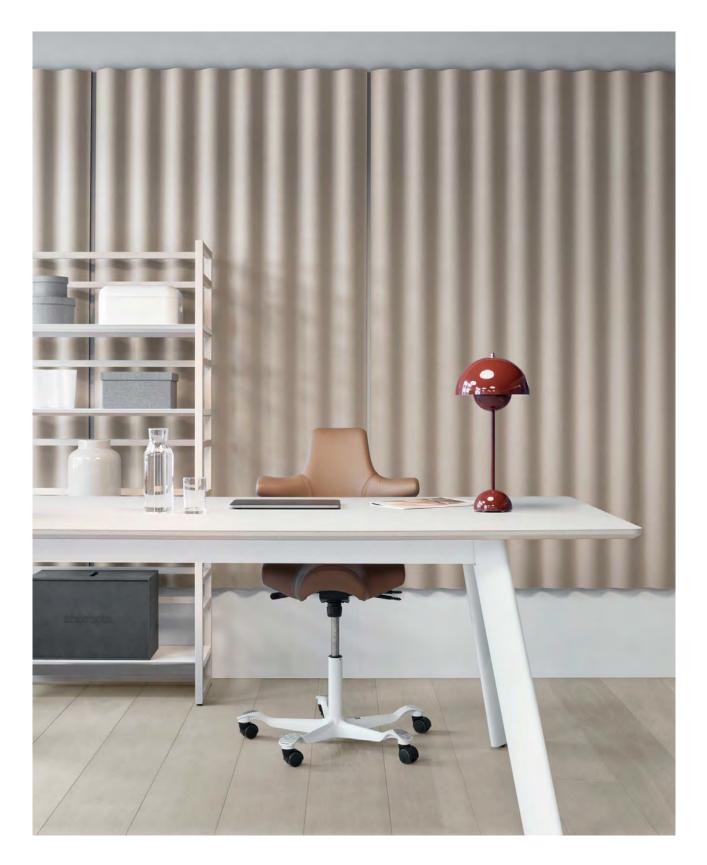

- Scala Ceiling p.38
- Scala Floor p.82
- Scala Mobile table screen p.91
- Scala Suspended p.120
- Scala Table p.90
- Scala Wall p.56

"Scala XL has a bold sculptural appearance."

Scala Wall

"A perfectly simple interaction between material and form"

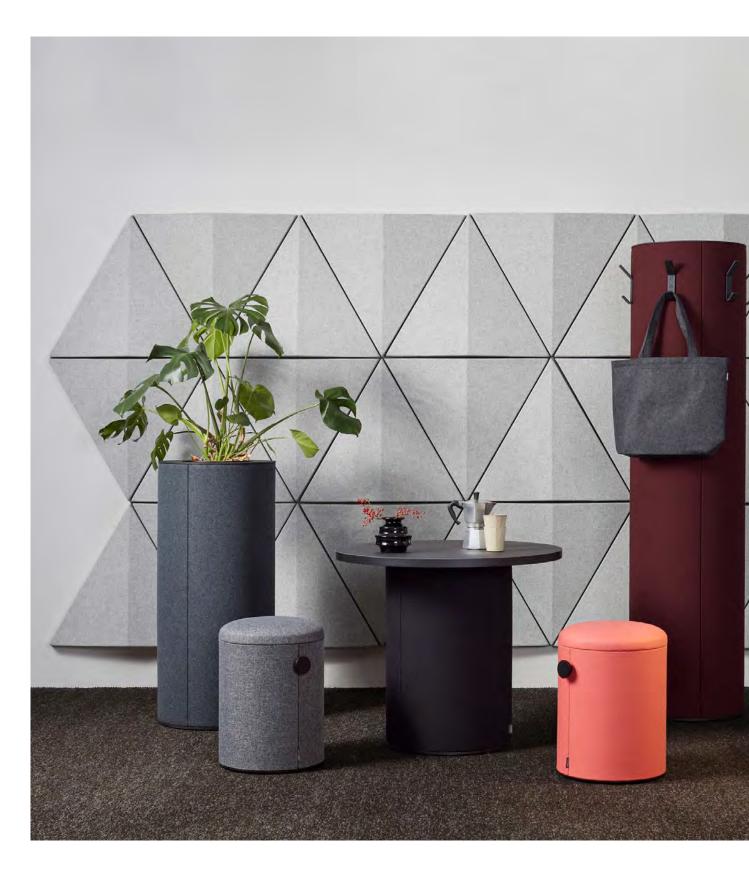

Scala wall sound absorbing panels fits perfectly into larger rooms thanks to its discreet expression. The undulating shape of the panel means that the product has a larger absorbent surface than if it were completely smooth. The modules are moulded panels that contain a sound-absorbing, fire-class core that can be upholstered with fabric.

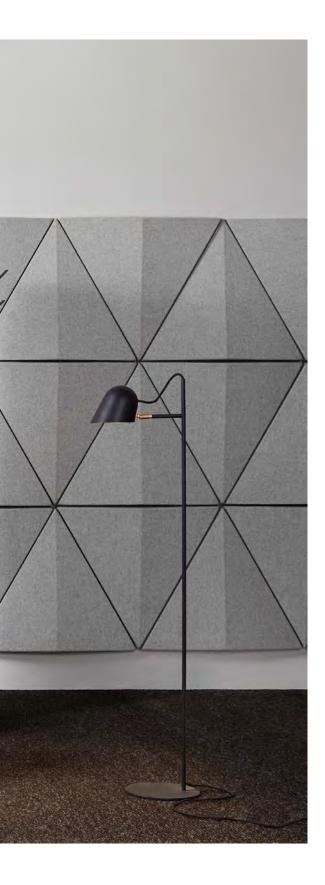

Design Absorption Anya Sebton Product family • Scala Ceiling p.38 • Scala Floor p.82 • Scala Mobile table screen p.91

- Scala Suspended p.120
- Scala Table p.90
- O Scala XL p.52

Bits Wall

"Less noise. More visual energy."

Anya Sebton's award-winning screen concept, Bits Wall, is based on the triangle – a geometric shape rich in symbolism. Here, the triangular form provides visual energy while contributing to a better soundscape by diffusing sound waves and thus preventing echoes. The triangular Bits Wall panels can be mounted both horizontally and vertically, allowing you to combine them in any desired pattern. Their interior consists of a soundabsorbent material, which is covered in fabric. The Bits Wall modular panels allow you to create combinations in whichever sizes, colours and patterns you wish.

Absorption

Design Anya Sebton

Domo Wall

Product family
Domo Cubicle p.102
Domo Floor p.81
Domo Table p.88
Domo Wall Booth p.104

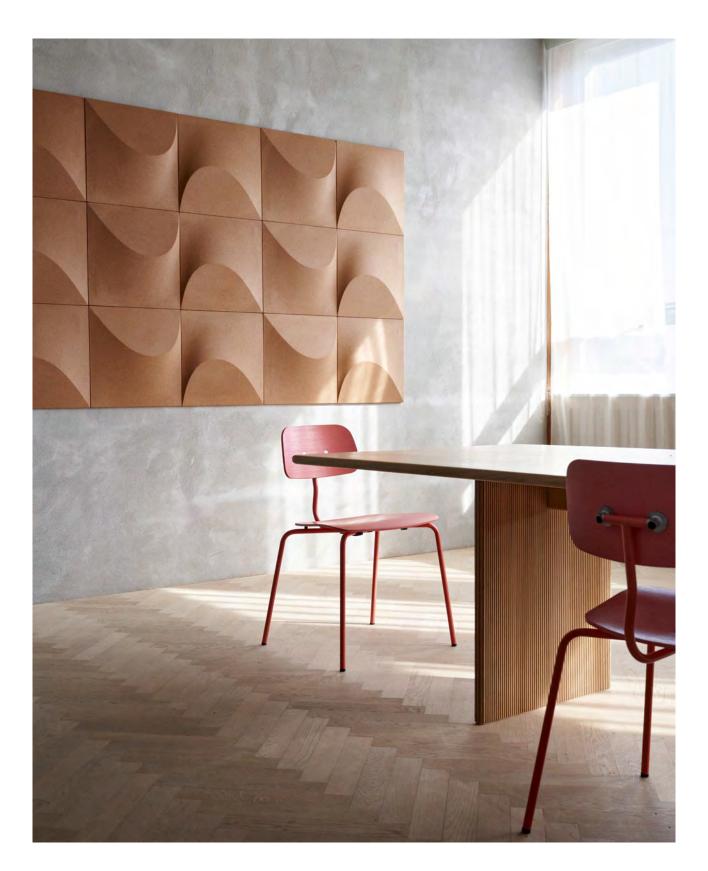

"For quieter and more elegant environments."

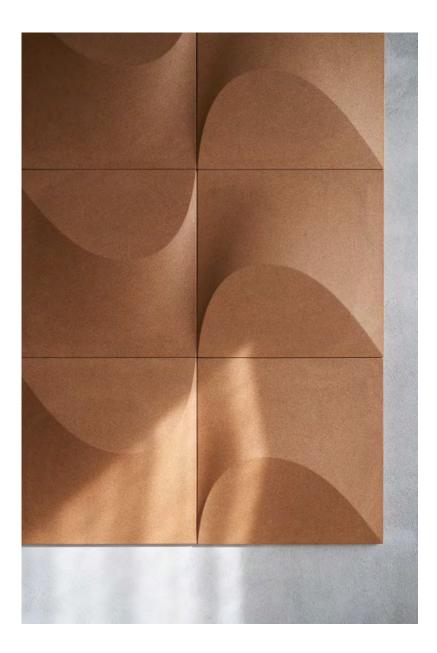

The full elegance of Stefan Borselius's Domo concept is revealed when multiple screens are combined on one wall. A beautiful interplay of light and shadows then emerges from the meeting of their bevelled edges. This dynamic is further enhanced by employing screens in different colours.

Absorption

Sahara

The wall panel created by Gabriel Tan is made of cork, a natural material that offers excellent acoustic properties. As simple and spontaneous as a sand formation carved by the wind, its shape is the perfect starting point for creating a multitude of patterns – from the asymmetrical to the symmetrical, from geometrically strict configurations to dynamic, random formations reminiscent of sand dunes.

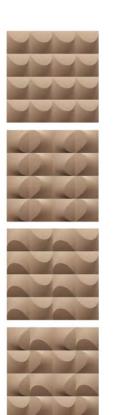

Diffusion

Design Gabriel Tan

Gabriel Tan creations for brands like Japan's Ariake and Sweden's Blå Station have been getting a lot of attention. Although he is based in Singapore, his works are profoundly cosmopolitan – inspired by trips to other parts of the world, conversations and collaborations with other designers, and encounters with an array of cultures and craft traditions. Sahara is a case in point.

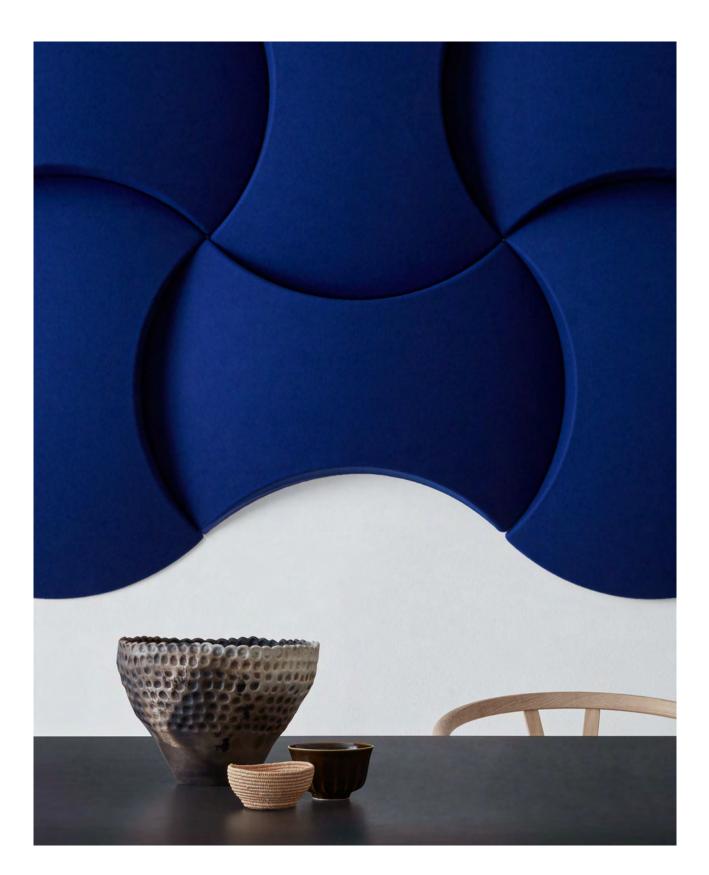

Thanks to its sculptural form, Sky delivers a radical improvement to the acoustic landscape. The shape's starting point is the sphere, which Stefan Borselius has reduced to an hourglass-like shape that forms beautiful wave patterns when the modules are combined with each other. Sky is available for both walls and ceilings.

Absorption

Design Stefan Borselius Product family Sky Ceiling p.124

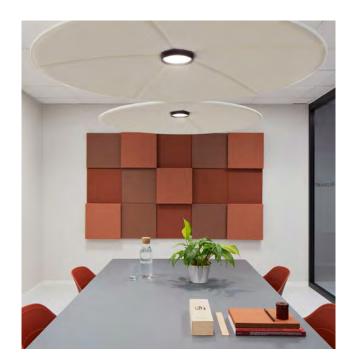

Soneo Wall

Product familySoneo Cubicle p.108Soneo Floor p.83Soneo Table p.94

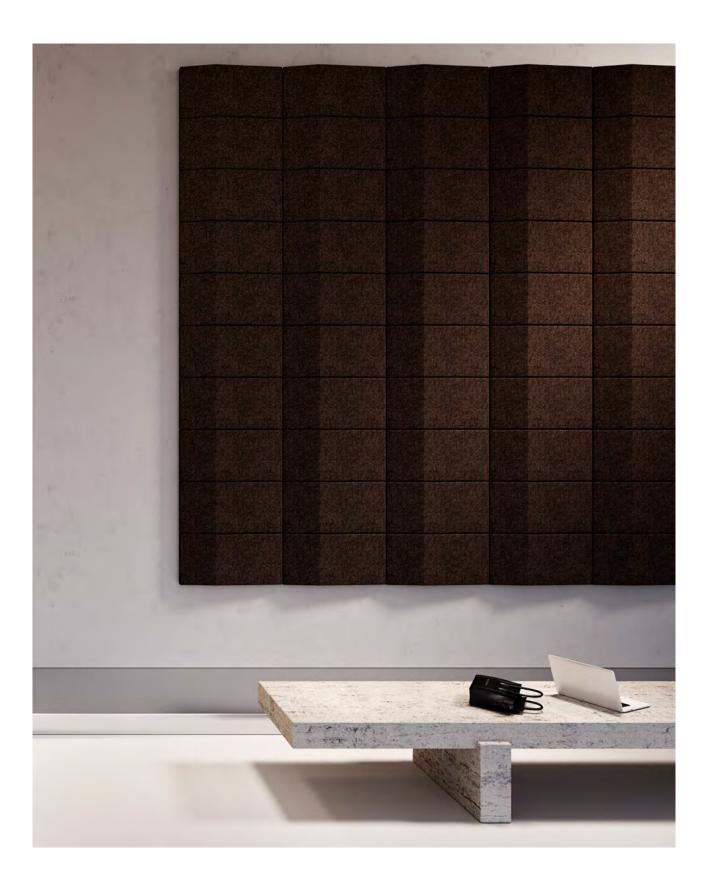

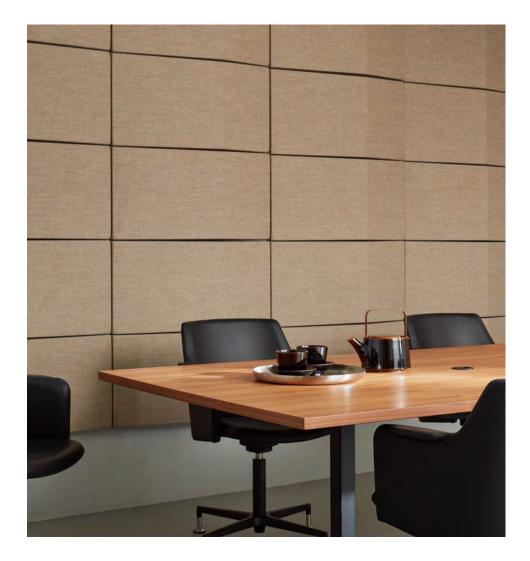

The square is the most elementary of geometric shapes. Yet despite its simplicity, its dynamic potential is limitless. Soneo Wall, a versatile system of sound-absorbent square panels, makes this particularly apparent. The panels can be freely arranged into different patterns and upholstered in a multitude of fabrics and colours. They are also available in two thicknesses, which can be combined to create even more dynamic patterns.

Absorption

Triline Wall

"A playful and efficient wall panel."

Triline Wall creates a better soundscape by both diffusing and absorbing sound waves. At the same time, the triangular prism shape of its panels interacts with light to introduce a visual dynamic and movement to the space. The sound absorbent panels can be mounted horizontally or vertically, allowing you the freedom to construct both symmetrical and asymmetrical formations.

Floor Screens

Abstracta Agile, Alumi, dB Floor, Softline Floor, Domo Floor, Scala Floor, Soneo Floor and Stitch Floor

Abstracta Agile

Design Studio Stockholm

Studio Stockholm is an award-winning architecture firm that works on projects of all sizes. Abstracta is proud to introduce the new mobile media screen Agile; made for work environments that demand excellent functionality, aesthetics and acoustics.

Agile contributes to a better soundscape by intercepting and absorbing ambient noise, so people working around it are not disturbed. Its materials are of the highest quality. The acoustic panel is covered in reclaimed wool fabric, and its elegant frame is made of low environmental impact aluminium. And Agile's simple, minimalist design makes it look as seamless and uncomplicated as it is to use. A perfect blend of technology and human-centred design.

Absorption

Alumi

Design Nina Jobs

Certain designers never fail to create self-evident things – objects that appear as though they have merely been nudged toward their natural form. Nina Jobs is one of those designers. Nothing is ever missing, nor is any feature ever superfluous. Naturally, this goes for every product she has designed for Abstracta.

Product family • Alumi Combi p.130

Alumi is an understated, versatile series of soundabsorbing screens by Nina Jobs. Available in several colours and discreet patterns, the screens are elegantly framed with an aluminium profile. Their interior consists of a noise-dampening material that creates a comfortable soundscape.

The design of the sound-absorbent Scala is not only developed for visual reasons, but primarily to contribute to a softer soundscape.

Basic Baffle

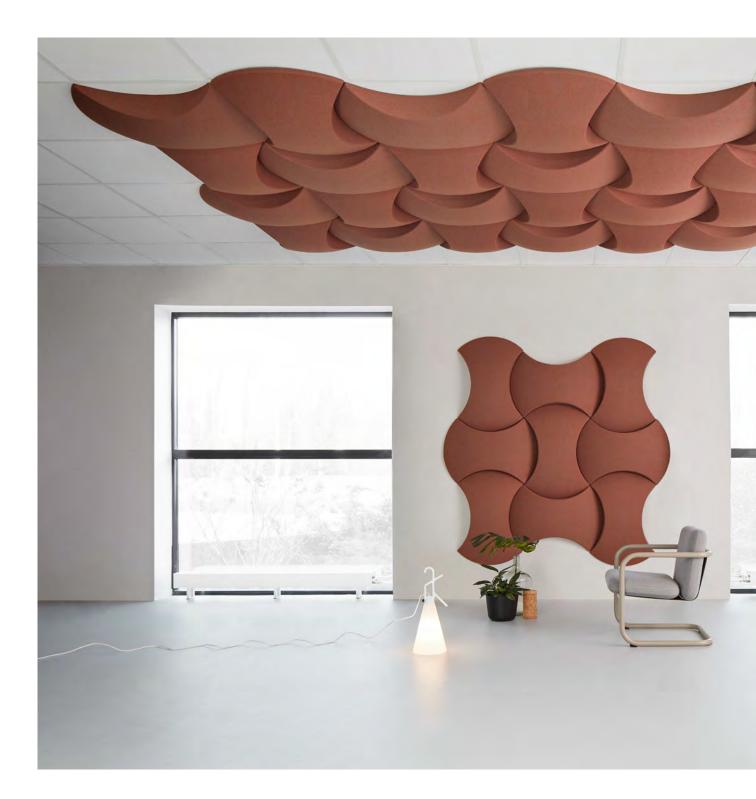

" Efficient sound absorber for ceilings."

Use baffles to effectively dampen sound in rooms with high ceilings! The sound absorbing raw core is made out of polyester derived from recycled PET. Basic Baffles are available homogeneously in raw material, known as "Soundfelt". Soundfelt can also be covered with fabric where the Soundfelt core can be seen at the edges. A wire kit for ceiling mounting is included.

Sky Ceiling

Product family • Sky Wall p.64

Insipid, featureless ceilings compromise the overall impression made by far too many interior environments. Sky, a modular system developed by Abstracta and designer Stefan Borselius, sets out to change this with a design language that imbues a room with visual energy while improving its soundscape.

Draft, Alumi Combi, MagVision, Moow, Sketchalot, Uniti and VIP

Draft

Design Tengbom architects

The Stockholm Concert Hall, the Swedish Embassy in Moscow, and Dockan in Malmö are just some of the well-known buildings that Tengbom architects have designed. Tengbom architects also design furniture with the same sensitivity to today's and tomorrow's needs that they apply to the task of designing buildings. For Abstracta they engineered Draft, a highly versatile whiteboard.

The mobile writing board Draft is developed with the needs of the contemporary, creative office in mind. It has a generous magnetic surface for writing (e3), and an anthracite grey steel frame equipped with lockable castors. The design is simplistic, almost graphic. Below the writing surface is a wood-framed tool tray in natural oak or anthracite grey stain. Draft is available in two versions – one with a writing board on both sides, and one with a writing board on the one side, and a beautiful corkboard on the other.

Alumi Combi

Alumi is an understated, versatile series of soundabsorbing screens by Nina Jobs. Available in several colours and discreet patterns, the screens are elegantly framed with an aluminium profile. Their interior consists of a noise-dampening material that creates a comfortable soundscape. Alumi Combi and Alumi Combi Light are smart floorscreens with a writing surface on one side and felt on the other. The whole family consists of following products: Alumi Floor screen, Alumi Combi and Combi Light.

Family ● Alumi Floor p.76

MagVision

MagVision is a highly functional and innovatively useful writing board consisting of a sheet of float glass mounted on magnetised metal. In its basic version, the glass surface is white. For those, however, who wish to use MagVision as a decorative accent, choose from our eight different shades or pick your own NCS colour, its offered on request. A pen shelf in two different sizes is available as an accessory.

Moow

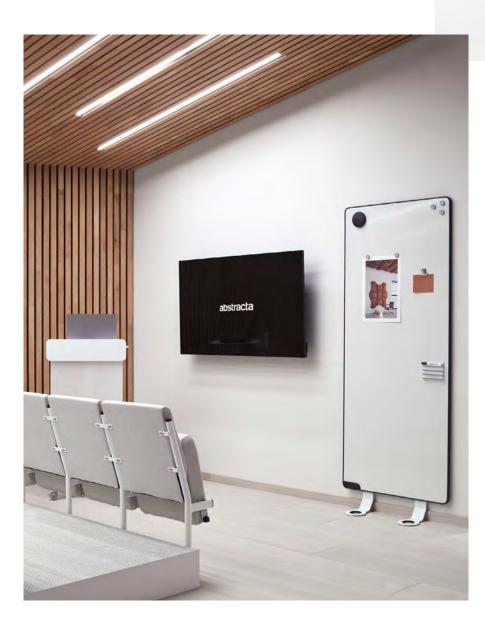

Developed by Stefan Borselius, Moow is an innovative concept that, at first glance, reminds one of bed sheets drying on the line. But hanging here on a rail are whiteboards of different sizes, easily slid right and left on their wheels. The concept also includes hooks for hanging flipcharts and wall-mounted static whiteboards.

The Moow whiteboard can be directly fitted to the wall. The tall hanging version of the whiteboard can also be used solitary standing on its wheels leaning against a wall. Another clever idea is to put a monitor screen on the wall behind a movable whiteboard.

Design Stefan Borselius

Sketchalot

Sketchalot is unique as a whiteboard in that it can stand perfectly flat against the wall without actually being fastened to it – thanks to its specially designed feet. So, when it's time to rearrange the office again, there's no need to worry.

Design Eelco Voogd

Dutch designer and entrepreneur Eelco Voogd has a background in the automotive sector, where he worked in marketing and design. Today, his work in the latter field ranges from design management to creating furniture and interior office concepts – often with the purpose of stimulating collaboration. Sketchalot, which Voogd designed for Abstracta, is one such product.

Uniti

Uniti is a high-quality whiteboard available in many sizes. Its magnetised e3 enamel surface is framed in silver or white anodised aluminium. Uniti is available with wall brackets or mounted on a wheeled stand.

VIP elegantly unifies the essential equipment of any conference room. The character of the VIP system is very straight forward and made with a 60-mm wide frame on all the products. It consists of a 60-mm wide rail for hanging a wide variety of boards. The writing boards are equipped with a ledge for markers.

Design Friis & Moltke

Ever since its inception in 1954, Friis & Moltke has been aiming to recreate Danish architecture and design. The studio managed a breakthrough in the 60's with a somewhat humane version of brutalism. Since then, they have been a leading player on Denmark's architecture and design scene.
